No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Information for Authors

Developmental Biology will publish papers containing new and significant information bearing on developmental mechanisms of general interest. Analysis of development, growth, regeneration, and tissue repair in plants and animals at the molecular, cellular, and genetic levels are topics suitable for the journal. In all areas, analytic rather than descriptive studies will be favored.

Original papers only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Persons considering submitting a Review should consult an editor before submission. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the Editor, the Publisher, or the Society of Developmental Biology.

Publication of a research article in *Developmental Biology* is taken to imply that the authors are prepared to distribute freely to interested academic researchers for their own use any clone (of cells or DNA or antibodies) used in the experiments that have been reported.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself. Brief notes are 1500 words or less, including the bibliography, and should have an abstract of less than 100 words and a limit of one page of figures. All papers will be published in English.

Manuscripts should be concise. Full documentation of results in support of conclusions should be combined with maximum brevity compatible with clarity. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results, and discussion. Combined results and discussion may be used. In the manuscript, acknowledgment, references, footnotes, tables, and figure legends should follow the discussion in that order. All pages of the manuscript should be numbered consecutively and typed double-spaced throughout. Authors should provide a running title of 35 or fewer letters and spaces. Use footnotes sparingly; cite them with superscript numbers and type them on a separate sheet. With rare exceptions do not italicize for emphasis.

Abbreviations and units should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (USA)*, the *Journal of Biological Chemistry*, and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation. The use of units should follow the Système International. Use prefixes, e.g., μM, not 10^{-6} *M*. Note that *M* stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name. *Line drawings* will be reduced in accordance with the complexity of the figures. Good quality prints are acceptable. The maximum size submitted should be 215 × 280 mm. *Photographs* should be submitted as actual size for reproduction, fitting column (90 mm) or page (185 mm) width. Sets of micrographs mounted on light cardboard and in combinations up to 203 × 267 mm in size are acceptable. For best reproduction, provide clear, glossy prints with adequate contrast. The magnification must be given on the photograph or in the legend. Figures that are to appear together as one plate should be mounted on cardboard or paper as close together as possible. It is important that the contrast and density of all figures mounted together be consistent. The printer will place thin white lines between the figures on each plate. Providing an overlay that indicates the most critical areas of the micrograph will aid in ensuring high-quality reproduction.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be retyped on separate pages and numbered consecutively with Arabic numerals, and each should have a concise heading.

References to the literature should be cited as: Doe (1985) has observed that . . . ; (Doe, 1985); Doe *et al.* (1980) should be used in the case of articles with more than two authors. Use suffixes a, b, etc., following the date to distinguish two or more works by the same authors in the same year (Doe, 1980a,b). Numbered references will no longer be accepted. Arrange literature citations in the bibliography according to the surname of the author, using the following styles:

> Denell, R. E., and Frederick, R. D. (1983). Homoeosis in *Drosophila:* A description of the polycomb lethal syndrome. *Dev. Biol.* **97,** 34–47.
>
> McLaren, A. (1981). "Germ Cells and Soma: A New Look at an Old Problem." Yale Univ. Press, New Haven, Conn.
>
> Murphy, D. B. (1982). Disassembly purification and characterization of microtubule protein without glycerol. *In* "Methods in Cell Biology" (L. Wilson, ed.), Vol. 24, Part A, pp. 31–49. Academic Press, New York.

Abbreviate journal titles according to *Chemical Abstracts Service Source Index*, 1980.

Page proofs rather than galleys will be sent. This speeds production. Detailed instructions will be sent with proofs. A quick response and minimal changes on proof are imperative to maintain schedules.

Features will include announcements of meetings and courses in the field of developmental biology, and some meeting reports. Persons interested in preparing meeting reports are encouraged to contact the Editor.

To submit a manuscript, send two complete copies including illustrations to Peter J. Bryant, Editor, Developmental Biology Center, University of California, Irvine, California 92717. Telephone (714) 856-4715. In the cover letter to the Editor or on the title page of the manuscript, indicate the name, address, and telephone number of the author who should be contacted in editorial matters.
